

## BEACON Remote for iOS – Physiological based ICU Ventilation Workflow and Management System on iPhone and iPad

**BEACON Remote for iOS** provides remote access from **iPhone and iPad** to all BEACON Caresystems installed at the ICU.

- ✓ Allows Respiratory Therapists to prioritize their workload based on individual patient's information.
- ✓ Allows remote simulation functionality for each patient, enabling remote support of junior colleagues at the bedside.
- ✓ Notification upon BEACON Caresystem advice for changes in ventilator settings.

**BEACON Remote for iOS** provides the unique opportunity to access your **BEACON** devices remotely, allowing you remote monitoring of the whole ward and the individual patient from **iOS devices**.

*Overview of ventilated patient on ICU department:*

*Access the individual patients and explore the physiology and history:*

### Quick overview of ventilated patient on BEACON Remote for iOS:

- Allows you to monitor all your patients remotely, at a single glance.
- Provides coloring of the hexagons which indicates the severity of the patients' respiratory system.
- Provides lines in hexagons indicating the greatest risks associated with ventilator management for the individual patient.

### Individual patient access on BEACON Remote for iOS allows you to:

- Explore physiological effect of changes in ventilator settings.
- Understand the patient's progress using remote viewing of historical data.
- Perform ventilation management as if you were bedside.

**BEACON Remote for iOS** allows to remotely perform ventilation management and prioritizing clinical resource according to individual patients' condition using a user-friendly iOS application.

**BEACON Remote for iOS** is expected on App Store for iOS devices in Q1 2016.
